

# allfoundations

**All Foundations is a specialist civil engineering contractor whose primary focus is providing cost-effective foundation solutions to the construction industry.**

We offer a range of services, from design through to installation, and by employing All Foundations you can be assured of a reliable and efficient partner for all types of foundation works throughout the UK.

Our team of qualified engineers and skilled operatives will provide you with a foundation solution that you can build on with confidence. Guarantees for up to fifteen years are available and you can contact satisfied customers who will attest to the quality of our work.

## **The benefits of working with All foundations are:**

- ✓ **Free advice on any type of foundation problem.**
- ✓ **Specialist knowledge of the construction industry.**
- ✓ **A design and construct service from conception to floor level.**
- ✓ **A structure ready to build on.**
- ✓ **Low mobilisation costs.**
- ✓ **Flexible work scheduling, working to your timescale.**
- ✓ **Minimal disruption to site.**
- ✓ **Controlled noise and vibration.**

**The philosophy of All Foundations is to give you a first rate service with minimum fuss, at a fair price.**

From our head office, close to the M1 in the East Midlands, and regional offices based in the north and south of the country, we are ideally located to service your contracts anywhere within the UK. At our head office, we have development and maintenance facilities for our own plant and equipment.

Whatever ground conditions or access restrictions your site may have, All Foundations will offer you an engineered solution for foundations or retaining walls. From Driven Piles to Open Bored, CFA or Hollow Displacement, we have a piling rig to suit the precise requirements of your site, including mini-rigs capable of working within 2.0m headroom! You may gain added value if you also employ us to provide a concrete package such as ground beams, slabs and basements.

## Choose from a broad range of systems, including:

### Driven Steel Cased Piles

Choose from 80mm to 300mm diameter bottom driven piles with an option for "silent piling" on sites that demand low noise & vibration levels.

### Driven Pre-Cast concrete & Tubular Steel Piles

For softer ground conditions you can choose pre-cast concrete piles up to 250mm square.

Top driven tubular piles available up to 300mm diameter.

### Bored Piles & Retaining Walls

If you require a vibration free solution there is the option to use open-augered, CFA or helical displacement piles with diameters from 150mm to 750mm, depending on ground conditions & loads.

Contiguous bored pile walls & Kingpost pile walls are also available for sloping sites & basements.

### Underpinning & Jacking

Using traditional mass concrete, beam-&-base or mini-piling techniques, existing foundations can be stabilised or have their load capacity increased. Where appropriate, structures that have subsided differentially may be jacked back to level.

### Reinforced Concrete Works

To complete your foundation we can design and install:

- Ground/ring beams.
- Pile caps.
- Slabs & rafts.
- Retaining walls.

### Geotechnical Capabilities

In conjunction with the above we can offer a range of additional services, including:

- Site investigation.
- Ground anchors.
- Heave protection.
- Fissure & Shaft Capping.

## All Foundations - the name you can build on

### Head Office

Primrose Business Park  
Whites Lane  
Blackwell
